

Australopithecus afarensis

(Drawn by R.A. Menegaz after C.B. Ruff)

ACROSS

- 3 ___ is a mode of locomotion in which an animal is adapted for spending large amounts of time moving or living in trees.
- 5 The "Taung Child" was discovered in South Africa by ___ in 1922.
- 6 Also known as "Lucy", *Australopithecus* ___ was discovered in 1974 by Donald Johanson at Hadar.
- 7 Australopiths retain ___-___ brains.
- 8 The genus name for a set of hominins that exhibit megadontia.
- 10 ___ is forward projection of the face, particularly below the nose.
- 11 AL-288, LH-4, and STS 5 are all ___.
- 12 *Paranthropus robustus* and *P. boisei* are sometimes referred to as the ___ australopiths.
- 13 Locomoting (walking, jogging, running, etc) on two feet.

Drawing of an *Australopithecus afarensis* skull
(R.A. Menegaz)

DOWN

- 1 ___ change may have been a catalyst for the initial evolution of bipedalism.
- 2 *Au. afarensis* is believed to have produced the famous ____, a series of paleosurface tracks in Northern Tanzania.
- 4 The oldest australopith species is known as *Au.* ___.
- 9 A morphologically primitive species *Ardipithecus* ___ may show some of the earliest evidence of bipedalism.
